DETAILED ACTION

Specification

The disclosure is objected to because of the following informalities:

On page 6, line 2, a typographical error in "referred to a black generation", which should read "referred to as black generation".

On page 6, line 15, a typographical error in "reduced to by the black value", which should read "reduced by the black value".

On page 6, lines 6-7 and 11-12, the numbers are not clearly represented as percentages.

On page 7, line 7, the sentence is incomplete: "component value is [blank]"

On page 8, line 12, a typographical error: "black generation value" in Fig. 3 is reference number **32**, not **34**.

Appropriate correction is required.

Drawings

Figure 1 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

Art Unit: 2622

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claim 1 is rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. The term "gray component density" and "gray component density value" are not defined or described in the specification so as to understand its meaning. Nor is it sufficiently represented in the prior art to imply an obvious general definition.

Claims 2-6, which are dependent upon claim 1, are rejected for the same reason.

Additional

Prior art references Iwasaki ('836), Kakutani ('682), Slade ('993), Motta ('245), Huang ('692) and Warner ('300) are included as patent material related to that of the application and have not as of yet been applied towards a determination of the validity of the claims contained in the pending application of this office action.

Iwasaki refers to diluted inks that are one third the concentration of normal ink, Kakutani, Slade, Motta, Huang and Warner refer to methods of mixing diluted and non-diluted inks.
